

Contemporary Luxury – Security and Automation in Italy.

Sometimes, installers have customers with keen attention to detail, like the owner of this building in the center of Vittorio Veneto (TV). Amadeus was chosen from several choices of installers with entry level, medium, and top level offers to integrate the luxury property, working closely with two architects, a designer, and a lighting technician (Viabizuno Italy, Stingers company from Treviso, Italy).

The homeowner requested management and control of every sub-system, including temperature, lighting, shutters, audio and more, which was accomplished by Amadeus using Leviton automation solutions. The entire property can be controlled utilizing the OmniTouch 7 Touchscreen, placed strategically around the home in several areas. The customer finds these controls comfortable and precise, utilizing on a daily basis.

All details and products were explored and vetted by the owner and the installation team, selecting Leviton components for a very happy client. The integration with Leviton's Hi-Fi distributed audio system was amazing and the customer is very satisfied with the quality of audio in the home. High-end components including Laboratoria audio subwoofers and satellite recessed ceiling and in-wall speakers are built-in to areas like the sauna, bedrooms, and kitchen.

The controls and settings on the lights (dimmed with color controls DMX protocol and DALI) completed

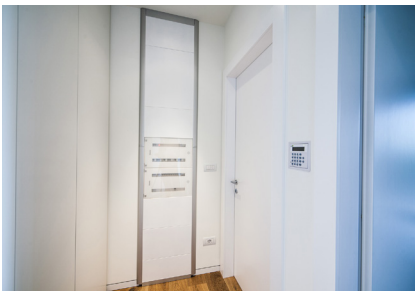

the custom construction. Furthering the sleek appearance, temperature sensors are all in-wall and invisible.

The Omni automation system is UL listed for burglary protection, which was a very important component for the homeowner. Having the system being security based with an energy management and entertainment focus was well received due to the well-known advantages including control from iPhone and iPad and free email/text notifications to mobile devices and PC's based upon events.

Ultimately, the homeowner considered the automation and electrical system installations a great success, with the highest possible accuracy and perfectionist attention to detail.
